As the Director of the LabSET team

The Support Lab for Telematic Learning (Laboratoire de Soutien à l'Enseignement Télématique - LabSET) of the University of Liège targets the deployment of eLearning in its own institution, but also at partners organisations, in Belgium and in Europe. The team always focuses on the pedagogical quality of the developed environments and on training the designers, future teachers, coaches and online tutors.

Since its creation in 1999, LabSET has gone from 4 to 35 people, thanks to external grants of more than 1M€ per year. Helping a scientific team emerge implies to imagine new research streams, to set up innovative projects and to deal with the consequent financial and human management.

The main tasks of this team management are research, evaluation of projects and programmes, participation to scientific committees, conferences, congresses and seminars as well as the organization of an internal professionalization plan for the LabSET team itself.
